

Klaus Graumann studied Food- and Biotechnology at the University of Life Sciences and Renewable Resources (BOKU) in Vienna, Austria. For several years, he worked in Professor Alois Jungbauer's Downstream Processing group at the Department of Biotechnology (Institute for Applied Microbiology) in Vienna where he earned his PhD in 1999.

Klaus Graumann started his career in the biotech industry in the same year by joining the Biotech Production department of Boehringer Ingelheim Austria. Early 2001, he joined the Technical Development group of Sandoz Biopharmaceuticals (former Biochemie) in Kundl, Austria.

As Head of Technical Development of Biopharmaceutical Operations (BPO) located in Kundl, he is currently responsible for technical development of recombinant, microbially derived products for the Novartis/Sandoz group. Streamlining the interface between development and manufacturing and following innovative approaches in expression and purification of proteins is of special interest to him.
